TONE contributes to provide safe drinking water in over 40 countries in Oceania, Asia, Middle East, Africa, Latin America, and other areas, by means of groundwater development.

Based upon 8 decades' experience of manufacturing rotary drilling machine and contracting groundwater development projects, TONE has delivered over 600 sets of water well drilling rigs and executed more than 20,000 tubewell construction works.

One of the typical activities executed in Nigeria, a rural water supply project financed by The World Bank Loan, was completed to construct total 2,728 water wells for the villages in both state of Bauchi and Kano.

The TONE truck-mounted water well drilling rigs, which were procured by the Ministry of Public Works and the Department of Power & Irrigation of Balochistan State Pakistan, under Japan's

Grant Aid, are operated at the Afghanistan Refugees Camp in the border area between Afghanistan and Pakistan. International NGO's groups, who execute the drilling works for providing safe drinking water to save the life of Afghanistan Refugees, are operating these TONE rigs.
